A short, simple self-assessment tool that predicts the difficulty of intubation using video laryngoscopy. The aim of this study was to create a tool to predict the difficult intubation from a patient's vocal cord position during laryngoscopy. The vocal cords of 800 consecutive patients were observed during intubation with a Storz Macintosh laryngoscope and a GlideScope video laryngoscope. The vocal cords of 250 patients were intubated by a different intubator. A visual analog scale for assessing the vocal cord position during laryngoscopy was created and tested for its ability to predict the difficulty of laryngoscopy and intubation. The vocal cord position was rated as being easy to moderate on a visual analog scale from 0 to 10 for a patient with grade 0, an anterior curve, and grade 10, a full arc of the vocal cords. A prediction of intubation difficulty was made based on vocal cord position during laryngoscopy. The intubator's difficulty was recorded. The intubator's prediction was compared with the actual difficult intubation using the chi-squared test. The average vocal cord position during laryngoscopy was a 7.3 +/- 1.5 and a 6.8 +/- 2.0 for the left and right vocal cords, respectively, during a patient's difficult intubation. Using a1d647c40b

Of course, I love to share all kinds of memories with you, but I also like to talk about the little things. The things my kids love or hate. The things I learn from them as I experience motherhood. I know, I know...we've all heard it before...you can't say anything too interesting about the first few years of your child's life. Why? Because they will "never get over it". Right. Well, if that's true, what's the point? I figure, why not pass along a few little tidbits that I haven't already shared? Maybe you'll learn something new about your own children, or just be entertained by some of the quiriness and innocence of a newborn. Here is the first of these little gems. A few months ago, my little guy discovered that he loved to "fetch". Basically, I would toss an object, such as a ball, in front of him, and he would go after it. I would place it on my lap (of course) and say, "fetch". He would sprint towards me, leap into my lap, and attempt to grab the ball from me. I would carefully pick up the ball and place it in his hand, giving him one last chance to fail. He never did. He never has. He's as sweet as they come. Here's how I ended the game: "Okay, buddy, it's time to put the ball down. Do you think you can?" He would simply look at me, wiggle a little, and place the ball on the ground. "Oh, you want it back? Go ahead and take it. Try not to drop it." He would scoot the ball over to his hand and then straight into his mouth. My, how is that for
