Going green: All power to the people The relationship between The State and its citizens has been shaped by a number of economic, political and social changes over the years. For example, following the 17th Amendment to the US Constitution, which gave state legislatures the power to legislate for direct taxation (rather than levying income tax through the federal government), they became increasingly powerful political forces and as a result, states have more power than they do now. Meanwhile, the 17th Amendment was preceded by the 16th Amendment to the US Constitution. This gave the federal government the power to legislate for direct taxation and following this, the US Senate became increasingly powerful, making it difficult for a democratic government to be elected. It's an outcome that we've more or less seen in Australia since the 1920s. So, the relationship between The State and its citizens hasn't always been so one-sided. In fact, based on more recent trends, it's increasingly more at the behest of the citizenry. In the late 1980s, a large number of people came to realise that it was never going to be a nice place for us to live once we'd all gone to our separate glooms. When people realise that they'll have to accept the fact that the world isn't a nice place, they're often more inclined to get their needs met and the more people realise that the world isn't a nice place, the more that people will try to shape it the way that they want it. Hence, people's growing awareness of the dire consequences of overpopulation, global warming and the like. The 50s saw the beginnings of women's liberation as well as the height of the civil rights movement. There was more freedom for everyone. The 60s saw the continuing struggles of the civil rights movement as well as the Vietnam War. Then, in the 70s, there was the sexual revolution, followed by the rise of the green movement. The 80s saw the continuing struggles of the women's and civil rights movements as well as the continuing high cost of running the Vietnam War. The 90s saw the continued high costs of running the Vietnam War and the introduction of all sorts of policies that were supposed to be good for the economy. The 2000s have seen the introduction of policies that have given us the current economic crisis and the recession
