AutoCAD 2017 Photo: Courtesy Autodesk The first release of AutoCAD was driven by the needs of architects and interior designers and was based on DXF, an interchange format developed by Autodesk in the early 1980s. AutoCAD is a DWG file format and is compatible with many of the older CAD formats including JT, DXF, and DXF-E. In addition to drafting and design, the DWG file format can also be used for engineering and documentation. Initially, AutoCAD had many of the features of desktop publishing software. In the 1980s, although it was mainly a drafting and design application, CAD designers used AutoCAD to create interior and exterior architectural drawings, furniture design, and products. To mark the thirty-fifth anniversary of AutoCAD, the user interface of AutoCAD 2017 was redesigned and AutoCAD now has a tablet-like look, with a full-screen workspace. AutoCAD, a

cross-platform and cross-platform mobile CAD software, is one of the best-selling CAD programs. With 2.9 million licenses sold, AutoCAD is the fifth-most-popular CAD software in the world. AutoCAD was first released in 1982. How the AutoCAD App Works

The value of histopathologic studies in patients with encephalitis. In a 5-year period (1992-1996) 180 patients were histopathologically examined and studied in the Department of Pathology, Clinical Centre Nis, for the cause of encephalitis and its complications. Sixty-seven (37%) of the patients were women. A total of 11 (6.1%) patients had a histopathologically confirmed diagnosis, the most common being anti-NMDA receptor encephalitis (5 of 11 cases) and anti-GABAA receptor encephalitis (4 of 11 cases). The main reasons for the reported inefficiency of the histopathologic studies in encephalitis are the lack of sufficient time and experience of the study in the departments of pathology, and not optimal testing in cases of encephalitis with unclear or non-specific etiology. The most frequent study results were positive for herpes encephalitis (5 of 11 cases), NMDAR encephalitis (5 of 11 cases), antibodies against the influenza virus (3 of 11 cases) and thymoma with encephalitis (3 of 11

cases). The most common histopathologic findings were necrotizing encephalitis (6 of 11 cases), thymoma with thymic follicular hyperplasia (3 of 11 cases), thymoma with lymphoid tissue hyperplasia (2 of 11 cases), and autoimmune encephalitis (2 of 11 cases).Q: Change text of button in a layout using javascript I want to change text of a button in a layout from JavaScript.
