History The first version of AutoCAD was the 1982 desktop CAD software. It was a DOS program that supported several DTP applications including DWG, DGN, DXF, and TAB formats. The software was produced by Fidus Technology and was sold to a company called Fidus-Martin of Watertown, MA, that specialized in supplying microcomputer CAD programs. Although sold through Fidus-Martin, AutoCAD was a self-developed program designed by David Martin and several other people working at Fidus. The first version of AutoCAD, released in December 1982, featured 2-dimensional (2-D) plotting capabilities and 3-D capabilities in the form of a 2-D interface. Additional features were added over the years and its functionality grew to include support for 2-D drawing, 2-D drafting, 3-D design, 2-D modeling, and 2-D animation. In 1986, the earliest versions of AutoCAD were ported to the MS-DOS operating system and are often referred to as DOS-era AutoCAD. In 1987, AutoCAD received support for DFX and DXF files. In 1992, the first version of AutoCAD that supported both Windows and DOS was released. AutoCAD was originally sold by Autodesk under the name MicroStation. The product, named after the Roman god of the sea, was originally developed by Fidus Technology and marketed by a company called Fidus-Martin of Watertown, MA, that specialized in supplying microcomputer CAD programs. $N_{\mathbb{R}}$  I am interested in the following question: Let  $G$  be a non-compact Lie group with Lie algebra  $\mathfrak{g}$ , and consider the subalgebra  $\mathfrak{n}$  of  $N_{\mathbb{R}}$  consisting of matrices  $X$  which commute with  $G$ . What does it mean for  $\mathfrak{n}$  to be smooth? Do we need to assume that the Lie group is real? In the literature, the most common approach is to assume that  $\mathfrak{g}$  is a real Lie algebra, but does it make sense to do the same for  $N_{\mathbb{R}}$ ? Does it make sense to ask about the Lie algebra of  $AN_{\mathbb{R}}$ , where  $A$  is some fixed real torus? Thanks! A:  $N_{\mathbb{R}}$  is a nilpotent Lie group, hence a nilpotent Lie algebra. One possible candidate for its Lie algebra is  $\mathfrak{g}^{\mathbb{R}}$ , the Lie algebra of the simply connected nilpotent Lie group  $G^{\mathbb{R}}$  with  $\mathfrak{g}^{\mathbb{R}} \subseteq \mathfrak{g}$ . The Lie algebra is real if  $\mathfrak{g}$  is real. If  $\mathfrak{g}$  is not real, one may consider a double cover of  $G^{\mathbb{R}}$  (say, by  $\tilde{G}^{\mathbb{R}}$ ), on which the corresponding Lie algebra is  $\mathfrak{g}^{\mathbb{R}}$

## What's New In?

Markup Assist – a new way to capture and incorporate feedback from printed paper and PDFs into your drawings. (video: 1:13 min.) Sketch Command – a new, easy way to draw and place objects in your drawings. See 2 new commands to quickly place a solid, dashed, or dashed-dotted sketch. (video: 1:08 min.) Building Repairs: Convert window and door openings into door-shaped CAD objects. (video: 1:23 min.) Convert window and door openings into door-shaped CAD objects. (video: 1:23 min.) Concrete New, like the other Concrete Modifiers, lets you quickly change the material properties of your concrete walls and floors. (video: 1:16 min.) Concrete New lets you change the material properties of your concrete walls and floors. (video: 1:16 min.) 3D Extrusion, introduced in AutoCAD 2103, can now extrude a 3D polyline or polysurface to create new objects in your drawings. The 3D Extrusion commands have been improved to make the extrusion more accurate and easy to control. (video: 1:13 min.) New Items: ABS+ switch – switch on the laser engraving on your paper cutter or plotter. Easily engrave your drawings in 2D, 3D, and vector formats. switch – switch on the laser engraving on your paper cutter or plotter. Easily engrave your drawings in 2D, 3D, and vector formats.
