Designed with ease of use in mind, LuteCAD enables you to customize the model appearance, as the color and the texture of each part of the instrument can be customized. Furthermore, you can modify parameters or part dimensions and preview the output within the main

window. Create a Parametric Model in 3 Easy Steps: STEP 1: Open LuteCAD and click on the 'Lute' tool on the tool shelf. STEP 2: Place the mouse cursor over the 'Root' (3.00mm) virtual plane. Press the 'Action' key (right click) STEP 3: Select 'Create Parametric Model' LuteCAD offers you the following options when creating a Parametric Model: Creating "CUSTOM" Parametric Models. You can create custom models with any type of geometry. You can also modify the parts directly within the main window of the main window of LuteCAD. The software offers different modeling possibilities. You can create "simple" models with one, two or three distinct parts. More complex models, like "rotating cylinders", are also possible. LuteCAD is equipped with the option to create parametric models in a step-by-step fashion. This allows you to create a model with a specific level of complexity. You can create parametric models of a 'structured' instrument or of a 'free-form' instrument. You can create full-size (life size) models of a fretted and unfretted instrument. LuteCAD also allows you to create 'Part-based' models. MODELING OPTIONS: - Creating a Parametric Model When creating a Parametric Model in the software, there are numerous options that can be modified: Part thickness (In tool settings: Create/Edit->Options->Part) Color (In tool settings: Create/Edit->Options->Lute) Texture (In tool settings: Create/Edit->Options->Lute) Geometry (In tool settings: Create/Edit->Options->Lute) Several other parameters, such as type and number of neck shapes, can be changed to suit your requirements. - Creating a 'Free Form' or 'Structured' Model You can import a 3D "
