I have included some recommendations with the download link!. To download RC1 ISO from the 3.1.0.6-RC1 after changes site. you have to replace the.right) \frac{1}{\omega}\ln\left[\frac{E\left(\omega \right)}{E\left(2\omega \right)}\frac{1}{\sqrt{\text{v}_{F}!}} \right],\\ \label{eq_5} \text{Im}\chi_{xx}\left(q,\omega \right) &= \frac{\pi}{4} \left(\frac{q}{2k_{F}} \right)^{2} \int_{0}^{2k_{F}}dx\, \left[n_{F}\left(x \right) - \frac{1}{\pi} \int_{0}^{\infty} d\omega^{\prime} \text{Im}\chi_{xx}\left(x,\omega^{\prime} \right) \right] \delta\left(\omega - qv_{F}x \right),\end{aligned}$$ where $\chi_{xx} = \chi_{yy}$. By using the reference values of the Fermi velocity $v_F=\sqrt{2\pi n_e/m}=4.3\times 10^{6}\, \rm m/s$, $k_{F} = 1.36\times 10^5\, \rm m^{ -1}$ and the electron density $n_e=0.3\times 10^{12}\, \rm m^{ -3}$ \[1\], the real and the imaginary parts of the current-current response functions are plotted in Fig. \[fig1\] for temperatures $T/T_{F} = 0.125, 0.25, 0.5$ and 1. Considering Fig. \[fig1\] we can clearly observe the main features of the current-current response function $\text{Im}\chi_{jj}(\omega,q)$: it is Lorentzian and can be roughly divided in a short-wavelength (sub-micrometer) and a long-wavelength (sub-millimeter) region. In
