May 11, 2016 - Mrs. Krebs (Erin Struckhoff) addresses religion during a rehearsal for the "prayer meeting" scene in Legacy of the Wind. Joe: So, The Scottish Play... Erin: I think you should be aware that not all Scots approve of this play, but I believe it's a good play. Joe: What? Erin: I just said... Joe: I know what you said. Don't pretend. Erin: I don't pretend it's a good show because I don't think it's a very good one. Joe: So what is "goodness" what are you going to tell me? Don't pretend. Erin: You know what I said. Joe: I

What does this mean? From their site, Yaaronvu The robot is capable of examining and analyzing various forms of communications and information, and has been integrated with computer and communications networks to serve their users in order to support their daily life. Yaaronvu assists in the daily life of the elderly by converting their thoughts and writings into words and sentences to allow them to think in a more natural way. The robot is intended for use in a variety of environments including hospitals, eldercare, public spaces, office and hotel lobbies, airports, cruise ships, etc. The robot is designed to be simple to use so that anyone can be assisted. There is no need for the user to become familiar with the machine. The robot requires just simple commands to carry out instructions. Users can also make adjustments to the settings and preferences of the robot to allow it to work as they want. As the robot provides services via the Internet and is connected to social media platforms and services, users can communicate with others around the world using the Yaaronvu robot. Also check out the video: A: It means they're subscription based, which is pretty much a marketplace or repository for content created by users. If you scroll to the bottom of the page, there's a section called "About Yaaronvu", which is pretty much the manual for how it works. It shows how they did the encoding, and you can see how they did it. There's a lot of technical jargon in there, so it might be hard to understand without some background knowledge in the area. Q: How to submit form & send data with multiple requests without refreshing the page I have a form with input fields and a submit button. When you click submit, it is supposed to make a POST to server and send the data in the form. At the moment the form is posted, the page refreshes and the data is lost. I know how to do it with one submit action and echo the request, but I'm not sure if I can do this with multiple form submissions. Any ideas would be appreciated. Thanks in advance c6a93da74d
