Android: OnDraw not triggered until ImageView is resized

I'm using an ImageView to display an Image. When the ImageView is clicked, a new view should be created, containing the image, which should be displayed centered. For some reason the onDraw() method is not triggered unless the image is resized. This is the code that gets called: @Override protected void onDraw(Canvas canvas) {

```
Log.d("onspray", "draw"); if(loading) return;
canvas.drawBitmap(sprayBitmap, (canvas.getWidth() -
sprayBitmap.getWidth()) / 2, (canvas.getHeight() -
sprayBitmap.getHeight()) / 2, null);

AutoCAD With Full Keygen

Before activating, choose the "Autodesk online" option.

Keygen activation You can activate the keygen using one of the two options : Activation by email (This is the recommended option) Activate this activation code online at the Autodesk License Center Download the license file and import it on the Autodesk License Center There are many reasons to activate using the keygen but the most important is that it's always safe to use.Q: Bash: split command line arguments that start with - Suppose I have a string argv[1] that is composed of arguments. It looks like this: -f A.out -a 1.2 -b 1.2 I want to convert this into a list of argv[1] argv[2] args. How can I do that? A: For any general case you may use: var=\$(printf '%s ' "\${@}") where "\${@}" is a shell builtin variable that is expanded to all arguments.

Examples: \$ printf '%s ' foo bar baz foo bar baz \$ printf '%s ' "\${@}" foo bar baz If the delimiter is a space, it may be more convenient to use: var=\$(printf '%s ' "\${@}" | sed's/ /g') Q: IBM Powermobile XLC G2 idle memory I have a battery powered IBM Powermobile XLC G2. I'm running on 7.2.1. The computer is supposed to consume less than 500 mA of current in idle mode. Does the idle current consume any significant amount of power? I believe the power is supposed to be supplied from the battery, which has enough capacity to keep the computer in idle mode for more than 24 hours if I remember correctly. If this is true, does the idle current mean that the battery will be drained after, say, 24 hours of idle mode? A: The idle current will likely not drain the battery. Idle current from the processor and the memory controller is minimal. There are several reasons why the battery isn't being drained: The battery can store enough energy that the idle current will not be significant. The

What's New in the?

Merge: Create merged layers from multiple drawings. Drawings will be shared and merged, or their parameters will be kept separate. In the end, you can export your merged drawings as new files. (video: 3:12 min.) New: Drafting: Create a new entity by selecting any freeform geometry, or import a closed polyline. Simply press and release the return key, and you can enter a new entity. (video: 3:30 min.) New: Search and Replace: Search and Replace is the new filter for content. Find and replace entire text strings, match on text anywhere in the drawing, even on subsets of drawings. (video: 2:48 min.) New: Selection Display: Turn off unnecessary or unused tooltips in the Viewport. (video: 4:29 min.) New: Legacy Layer Refactor: Removal of multiple-drawing layers. Each Drawing layer is a named entity, and a new Layer entity is created for each drawing, instead of an Entities layer. A subset of Entities can be found on the Drawing layer, which is fine if all you do is work with one set of drawings. (video: 3:29 min.) New: Multiline Commands: More commands available when the cursor is on multiple lines of text. Shortcut keys are available to toggle the visibility of a single line, show the command menu, etc. (video: 2:43 min.) New: Viewport Zoom: Users can now zoom the Viewport using the Command-R keyboard shortcut. Press Shift to quickly zoom back out to your previous level. This is available in both Design and Edit views. (video: 3:24 min.) New: Stored command History: Command history is stored in a file on the computer's hard drive. This is useful when you want to save a single command or series of commands. (video: 3:28 min.) New: Designer Changes: Designer and On-Screen Display changes: Highlight active 3D editing tools by pressing F12. Get an immediate update of the On-Screen Display (OSD) tooltips. You can also quickly check your Display type. (video: 3:28 min.) New:
