Ssspsx Pad Plugin Pressure Mod 1.6.0 Download

there are four different modes that can be selected for the mod: standard pressure mode. this mode simply adds a dedicated pressure pad to the player, that can be used to increase or decrease the player's speed. sniper mode. this mode adds a sniper pad to the player, that can be used to increase or decrease the player's speed. speed mode. this mode adds a speed pad to the player that can be used to increase or decrease the player's speed. lever mode. this mode adds a lever pad to the player, that can be used to increase or decrease the player's speed. i tried to make this mod in a way to be as similar to the original xpad plugin as possible, so it's a relatively straight-forward port of the xpad plugin pressure mod. this means, that the mod doesn't use the command blocks, the buttons and the new and old variables that are added to the original version of the xpad plugin pressure mod. instead, this mod features a dedicated panel for the different settings. the system can vary from player to player. here is the general idea of what the plugin does: the system is started and told to stop after it has been moved to the position the system is told to start poking the player and move it around the map. the system is stopped again the system is started again and moved to the position the system is stopped again this plugin uses the system to get the player to a certain position and then will poke it around. now for the code. it is pretty simple. it justs does the system and then manipulates the player to get it to the correct position.
