that dual mode might not sound too exciting, but when you consider the other potential uses, it sounds pretty appealing. you can choose to use the special agent only, or the percussion agent, or both, with or without the effects, and each of the two stereo outputs. or you can use the special agent, the percussion agent and the dual mode together, splitting the results in four different ways, but always retaining the ability to balance the two outputs as if they were two different kits. as you might expect, many of the effects are the same as they were in groove agent 2, but they've been brought up to date, and of course, the new special agent and percussion agent modules come with their own collections of samples and fx, which are also not replicated in the other two modules. these sound great too, and although they offer a similar range of kit options, and the same wet/dry control options, they also offer some unique features. for example, the special agent comes with a number of drum styles, but also a section for 'custom' samples, where you can create and edit up to 64 of your own samples. the more you edit them, the more you are given the opportunity to edit the samples themselves, and there are a lot of options here, not least for adjusting the way each sample is processed, or choosing from a variety of effects to apply to the recorded sound, including eq, reverb, compression and distortion. in addition, you can also apply a 'dry' sample, which is a sample without any effects, and you can also assign them to any of the three modules. if you are interested, you can check out the link for the full details and a download link for the zip file, which you can unzip to a convenient location. personally, i found it a very promising and useful addition to my toolbox and you may feel the same. i'm looking forward to hearing what you think about it.

the groove agent was particularly well thought out, as it's perfect for the beginning drummer who's just starting out, but who doesn't want to spend a lot of money on a drum machine. it's also a great way for the drummer to expand his or her music library, and steinberg have made it very affordable, especially for the beginner, which makes it a very good starting point for the drummer who wants to expand his or her music library. steinberg groove agent is a drum machine that's perfect for the beginner or intermediate drummer who is looking to expand his or her music library. the steinberg groove agent is a good starting point for the beginning drummer who wants to expand his or her music library, and is an affordable option for a newbie drummer who's just starting out. before you get started it's important to make sure that your host application is set up to match the vst version. if you are using cubase sx3 or cubase sx4 then you may need to set the user setting, 'listen to groove agent 3 plugin' to 'yes'. if you are using cubase sx3, sx2 or cubase le then you should select 'listen to groove agent 3 plugin' to 'yes' in the plugins menu. i tried it on cubase sx3 and it worked perfectly. the good news is that you can save your own presets for any agent and it's also possible to do this for any combination of agents. however, you can only do this for the presets panel, not for any other panel or parameter, and you can only save presets for the current interface. the best way to save presets is to use the 'add preset' button, which instantly creates a new preset and saves it. 5ec8ef588b
