With so many years of experience with Lightroom, I've been able to write Lightroom scripts, especially for faster and more accurate work. The problem with scripting is that the entire script must run every time you wish to change something, which leads to long wait times. Most scripts for Lightroom perform some action only once every 5-10 images. Making scripts run faster and smoother is what saves time. That's why in Lightroom 5 we're introducing the ability to script your processing in a batch process. In the above image, I set up a regular "Adjust Levels" action, and then, I added a script that would run the "Adjust Levels" action a bunch of times and save the results. Then, I decided to look at the effects of the Scripted Action, and noticed the Actions tab was empty more than half the screen. That's a red flag. If that's the case, it's a sure sign you're using Photoshop incorrectly. When you are using regular buttons (no scripting), you're more likely to make mistakes or perform incorrect tasks that can lead to problems later on. Review panels are available in Photoshop, Lightroom, and InDesign CC. They go beyond simply asking for comments to include a review score and other comments. You don't have to close and reopen the PSD to make edits. You can keep making edits as reviewers add their comments. Users can tap the share button and choose to send Adobe Feedback through the Photoshop interface. When they do, the comments appear in the review panel. Or, they can go to the Adobe Feedback portal from Start | Feedback.

Photoshop has the most power and variety from all this variety, the photo editor is the most influential photo app in the modern smartphone penetration, and it has a rich feature set of image processing, a wide variety of tools and adjustment tools, an ability to composite images together and improve their quality and performance. With a wide range of smart and colorful effects and 3D effects, you can create best images. However, Photoshop still has some shortcomings for some users. Some people feel that Photoshop is not as well integrated as it should be, without any real advantages in the product. Some users say that they like other editing options, such as Corel PIX, Tiffen Studio, Adobe Lightroom, and so on. The new CC version is an interactive application that offers new cloud functionality, a new apps panel, a new right sidebar, and more. You get a deep file browser that handles web links and file types from Google Drive, iCloud, and other platforms. It also contains advanced editing tools, including the new Content-Aware Fill feature. Adobe's Content-Aware technology analyzes the colors in your images, finds colors similar to what's in the background, and fills the colors in the background up so that the small difference between the

content color and the background becomes a small difference between the content of your image and the background. Photoshop CC supports new editing tools. All these tools can be updated and improved in new ways thanks to Adobe Sensei. One of the most cutting-edge additions to CC is the ability to add materials and 3D content to your images. You can also create animated elements in the new features edit, Blend and Motion. In addition, there are a vast array of new features, called Adobe Matching, Adobe Wrinkle Removal, Adobe Patch Removing Color Range, and the Application Flow. As you use the Adobe Photoshop CC software, you can share your web link by using the new Shared Links feature, and you can now upload video files in the new Filters, Adjustment, and Layers panel features.

Users of existing third-party photo workflow solutions such as Adobe Lightroom or Apple's Aperture will retain their existing workflow and continue to use them with Photoshop in a different user interface. Existing third-party integration plug-ins for Photoshop will still work, and there will be no change in interaction between Photoshop and other products in the workflow. In addition to the new native features announced today, Adobe is also preparing to charge a $99/ year subscription fee for both Photoshop and Photoshop Elements. This move is based on the Adobe Creative Suite (which is a set of applications including Adobe Photoshop as a core set of applications) subscription model. The subscription is available as a monthly, yearly, or an annual subscription and is available for both desktop and mobile versions of Photoshop (as well as Photoshop Elements) and the subscription will be available for all platforms to deliver the best experiences for paid subscribers. The subscription will be available in late summer of 2017. We know that this is not the ideal way to deliver Photoshop or Photoshop Elements, so we are also exploring other alternative delivery models as well. The key point here is that we will make the best version of Photoshop possible with the native resources of our operating system. And we will make the best possible Photoshop Elements software as well. This ensures users consistent performance and the best possible experience no matter what they are doing including online.
