The program is designed to work with files, folders, and registry keys (including drives). Just drag and drop files, folders, or registry keys on the software, and the files will be encrypted. Dragging a file or folder will not only encrypt it, but it will also open the encrypted files in your default text editor (by default, Notepad). You may change the default program by editing the Encrypt.ini file. The software also enables you to

encrypt registry keys and data stores in the registry. This is a powerful security tool, because it prevents hackers from stealing your passwords or any other personal information stored in the registry. Drag File Locker supports multi-users and groups. It will allow you to encrypt files, folders and registry keys shared among different user groups. By default, Drag File Locker will encrypt files in a hidden folder, so the encrypted files cannot be discovered in Windows Explorer. Drag File
