What's New In IceFX TraderAgent?

- Allows for the automated opening and closing of trading positions - Super simple to setup - Makes trading super fast - Highly customizable - Comes in two versions, a standalone executable and a.zip file IceFX TraderAgent Video Tutorial: Revise TradeAlert Setup using the MT4 Addin IceFX TraderAgent The FOREX market is highly dynamic, mostly due to its vibrant traders. The geographical dispersion of all the factors involved ensures one can always find good deals whether wishing to sell or buy currency. As such, multiple tools have been devised to allow users to obtain the best results. IceFX TraderAgent is a MetaTrader 4 plugin allowing its users to open or close positions easily and swiftly. Requires MetaTrader 4 This setup ensures users retain all the benefits of the main MetaTrader application, while also streamlining certain features for an overall faster and improved trading activity. It should be noted that the addon is only compatible with version 4 of the MetaTrader tool. The utility comes in two packages – a standalone executable and a ZIP file requiring manual installation. While the former item does not require any additional information – other than that users must specify a valid path to the host application, the manual setup is performed by following these steps: copy all the folders located in the archive, then launch MetaTrader and navigate to the "File" menu. Select "Open Data Folder", then navigate to the "MQL4" folder and paste contents,

overwriting any data when prompted. Open and close positions with just one mouse click Regardless of the type of installation performed, employing the addin within the main application requires the options "Allow automated trading" and "Allow DLL imports (potentially dangerous, enable only for trusted applications)" to be checked in the "Expert Advisors" tab of the "Options" window. After users have gone through all these preliminary steps, one can enjoy the actual benefits. These include the ability to open and close positions with just a single mouse click, thus avoiding the standard 'Order window' approach. Similarly accessible are the options for reversing a position, as well as defining trailing stops. The application can also be configured to automatically close all or just specified positions at a certain date and screenshots can be taken upon closing or opening positions. These are great methods of keeping logs of trading operations and going over any mistakes – if such cases arise. An overall worthwhile addon that streamlines many core functions of MetaTrader Summing up, Ice

System Requirements:

Frequency: 2.1 GHz or higher Power Requirement: 12V - 24V Output power: 300 - 480W Instruction: 1. Turn on the main power 2. Install the power cable 3. Carefully screw down the back side of the unit and install the connector 4. Turn the power supply on 5. Slowly plug-in and screw down the fan 6. Screw down the front side of the unit 7. Plug the fan power cable into the socket 8.
