Java2UML is an accurate and convenient tool for viewing and generating UML class diagrams from your Java projects. It allows you to view class diagrams within your web browser or export them on your computer as image files, for future reference. To get started, you only need to click Open and select your project from the folder containing your Java projects or a JAR file. Java2UML then analyzes your projects and generates a UML class diagram that you can see on your screen. Then, you can easily edit the diagram, add new classes or methods or export it as an image file

to your computer. The application offers you the possibility to export the diagram as a PNG file, which you can then use in your web design projects. In addition to that, you can also create UML sequence diagrams, UML statecharts and deploy UML class diagrams within your web browser. If you do not want to use UML diagrams for your Java projects, Java2UML is a useful tool that helps you build class diagrams, sequence diagrams, statecharts, and deploy UML diagrams. It can also help you export class diagrams and sequence diagrams as PNG images. Java2UML can also generate UML class diagrams based on a JAR file This application also allows you to

generate UML class diagrams from your Java projects in case you want to keep them in a JAR file for your later use. To do so, you can select the JAR document you want to use from your file system and then choose Open in the application's main window. Java2UML then loads the contents of the JAR file and uses them as a basis for the UML diagrams. To sum it up, Java2UML allows you to generate UML class diagrams from your Java projects, by loading them from a JAR file and can also analyze the contents of a JAR file and generate a UML class diagram from it.
