Keymacro is a utility that

enables non-expert users to map Alt-Numpad keystrokes to MS Windows 95/98/ME functions such as "cut", "paste", "Find" and "Print". It installs a DLL which intercepts keystrokes and maps them to Windows 95/98/ME function keys.

KEYMACRO's feature set is to enable users to quickly learn how to use Windows 95/98/ME without having to re-learn what the function keys do. Keymacro was built to be simple to use

and requires no installation. It is compatible with all versions of Windows 95/98/ME. However, it has been tested with Windows 95/98/ME only. If you are running a different version of Windows, keymacro will not work. The feature set of keymacro is to enable users to create shortcuts to Windows 95/98/ME functions. For example, you can quickly paste a file from a floppy disk by pressing Alt-Left. Using

keymacro is very simple:
Download keymacro and
run it to set up the
mapping. Once you have
mapped your keys, copy
the keymacro.ini file to the
appropriate directory in
your Windows 95/98/ME
install (usually
C:\WINDOWS\). Windows
95/98/ME must be the
default system in Control
Panel -> Regional and
Language Options Run
keymacro when you boot.
How to use Windows

95/98/ME Function Keys
with Keymacro. 1) Click the
Start menu. 2) Choose
Program Manager. 3) Select
Control Panel. 4) Select
Regional and Language
Options. 5) Click the
Change button to the right
of Default Keymap. 6) Click
OK. 7) Restart your
computer. 8) Run
keymacro. If you have
made mistakes while
setting up the mapping,
you can undo by closing
the program, then re-run it.

Once you are satisfied with the mapping, quit keymacro. You can now press the Alt-Left key combination to cut the contents of the clipboard and the Alt-Right key combination to paste. Keymacro is in the "Unofficial" section of CNet's Download.com. For more information on how to use Windows 95/98/ME function keys, see: [2edc1e01e8](#)

History: The MikeOS system call set was originally created by Leo Liu and Evan Gaillard for the Micro Open Systems OS

Design and Implementation class at Colorado State University in 2003. In 2004, Leo Liu used the mikeos-doc project as a basis for the Red Hat College "Intro to OS Development" course. MikeOS was rewritten and re-released in January, 2005, based on feedback from the Intro to OS Development course. Support: The mikeos-doc project is a large collection of documentation and tutorials for MikeOS. The

goal of mikeos-doc is to provide free, high quality, up to date documentation and tutorials to MikeOS users, developers, and hobbyists. The documentation is organized into the following areas: -
