Q: How many ways to write  $2^{12}$  as the sum of 4 consecutive 3-digit numbers? How many ways to write  $2^{12}$  as the sum of 4 consecutive 3-digit numbers? I know the idea, but I would like to know how to solve this problem.

A: The "short cut" here is to note that  $2^{12} = \sum_{j=0}^{\lfloor \frac{12}{3} \rfloor} \binom{12}{3j}$  (you just want to use the identity that  $n! = n \cdot (n-1) \cdot \dots \cdot 1$ ) Now, note that  $\binom{12}{3j} = \binom{12}{12-3j}$ . So you just have to sum up  $\binom{12}{12-3j}$  over the possible values of  $j$ . Can you continue?

Q: Design aspects of object oriented programming Why would you create new classes when you can create objects of already existing classes. For example, for creating a user object in a class you could use new User(). However, why would one create a new class for a single object? For example, why would you create a UserFactory class that internally creates user objects in an instance factory? In the below example, what is the difference between the first two examples?

```

User Class
class User{
  private $username;
  private $password;
  public $is_valid = false;
  public function __construct($username, $password){
    $this->username = $username;
    $this->password = $password;
  }
  public function login($username, $password){
