## What's New In Remote Network Watcher?

Remote Network Watcher, managed from your web browser, will do a good job if it's been left to itself. However, if you care about the quality of your Internet connection, this all-in-one online tool is a must. Remote Network Watcher continually tests your connection and emails you if it detects any

issues. Plus, Remote Network Watcher will automatically record your Internet speed, download and upload speeds, DNS and the time elapsed. Features: Remote Network Watcher will test the quality of your internet connection. How to Start? Launch Remote Network Watcher and accept the license terms of use. Then, click on the Start button. In the Remote Network Watcher menu, you have the following options: Browse...: To see the list of available network routers on your network, simply click on Browse and enter the IP address or hostname of the router. Test: To test the quality of your Internet connection, simply click on this option and choose from the following options: 1. Test speed: To test your Internet connection speed, choose the type of test you want. The available test speeds include: Long-term: To test your maximum speed or peak speed for a long period. Normal: To test your current average speed. Short-term: To test your average speed for a short period of time (a minute or two). 2. Test DNS: To test your DNS connection, choose from: DNS error rate: To test your ability to resolve a certain domain name. DNS latency: To test the speed of DNS resolution for a domain name. DNS troubleshooting: To analyze your DNS configuration and/or troubleshoot the problems you may encounter. 3. Advanced settings: To check your Internet connection for other irregularities. For example, whether your connection fluctuates, or your connection becomes slow over time. Test your Internet connection: To test your Internet connection using your computer or a computer at another location. Manual network testing: To manually test your network's connectivity. Alerts: To receive an email when the quality of your Internet connection is good or bad. How to Use Remote Network Watcher: 1. From the Start button, launch Remote Network Watcher. The Remote Network Watcher window will appear. 2. Choose one of the options: Browse to find a Network Router. Test your Internet connection: To test your Internet connection using your computer or a computer at another location. Alerts: To receive an email when the quality of your Internet connection is good or bad. Manually test your network. Note: Remoting Interface: You have the option of creating a Remote Network Watcher account or using the basic registration. This is an option to find the main window by searching for "Remote Network Watcher" from your browser. The basic
