KeyMacro is a useful Windows

utility that helps you capture and save keyboard shortcuts of applications on your system. KeyMacro lets you create and manage different shortcuts that you can assign to various actions, such as launching programs, navigating through the Explorer and even menus. With KeyMacro, you can use the keyboard to launch applications, folders and even the entire Windows operating system and assign them to different shortcuts. Additionally, you can see the shortcuts assigned to any program and even an application in the clipboard and the history of all keyboard shortcuts you have assigned to it. You can

launch KeyMacro in the same way you launch other applications, so you can quickly access its functions by using the familiar shortcut keys or a hotkey. Using KeyMacro is easy. Simply launch the utility, and a menu will pop up. Select the programs and the actions you want to assign a shortcut for. To add a program or an action, simply hit the Add button and assign a name to your keyboard shortcut. Select the program or the action you want to be assigned to the keyboard shortcut, and hit the Apply button to activate the shortcut. To remove a shortcut, just hit the Delete button and assign a new name

to the keyboard shortcut. KeyMacro creates keyboard shortcuts that can be launched from any Windows application. However, you need to use a Windows XP-style keyboard with a Control key. As soon as you start using the tool, you will be amazed by its performance, and you won't be able to find another utility that can help you create and manage shortcuts in this way. KeyMacro is a useful utility that you should consider using to speed up your work, help you navigate your system and create shortcuts that will fit your needs. I downloaded the portable version and kept it on my flash drive. That way, I could run the program on my netbook and not have to leave it in my home to search. After the version 3 upgrade I haven't been able to get the flash drive option to work. I'm having trouble installing the program. It wants me to select the installation directory. It gives me 3 choices. Drive C:, Drive F:

and Drive G:. I have no clue what any of those mean. They seem to be partitions. I went into Disk Management, but there is nothing about that on the disk. What do I do?
