Why is everyone making preview-a-thon jokes? Is it because we're all busy and don't have time to experience it? Maybe I missed it, but I thought I've read something about a preview-a-thon somewhere. Anyway, the feature is nice, but I miss fixed Library view (I mean not that horrible one with every image opening in separate window, but the one which opened in one window). I'm working with UHD 4K video right now and I have absolutely no time for any processing, but I just took few frames at initial pre-production stage, added color correction, red-eye reduction and employed the "sandwich" effect (using the amazing Snapseed). Previously when I opened the frames in Photoshop, then processed them in PS and saved them back (hundreds of times back) to my network storage, for some reason the resulting video would have weird artifacts and lack of color. So, I've started working with this "sandwich" approach and I'm very happy with the results. Now I can open my frames straight to Photoshop, work, leave the frame for a while, come back to it later and... voila, I've just created my sandwich, just saved it in Dropbox and it's all ready to go. Prove me wrong, Adobe. I'm ready. The new feature where I can simply select a folder of pictures (with a selectable slider of one or more pages) comes in very handy - yes, I finally found its real purpose. Is it not obvious?

With this new feature, you can search for images just by location any time and access them, one by one; make design changes and save. And after having closed Photoshop (of course), you can continue your work on them right from the Dropbox.

I love it.

Adobe Photoshop plugins:

- Adobe Photoshop plugins are written extensions for Photoshop, they can be written in any language. They are the most important add-ons for Photoshop. Photoshop extension is different from Photoshop Action because it is written in a different language, C++ is the most commonly one of platform languages, and it can be run in Windows as an app, or run inside Adobe Flash, so Photoshop action can be run on Mac and Windows. Some plugins built based on Adobe Flash, video or raster image editing.
- Photoshop plugins are the most used and popular add-ons you can add to Photoshop. But when we review them, we find a lot of rubbish and useless plugins, because developers have not thought through the aspects of Photoshop's entire technology depth. Some use their own proprietary and built-in plug-in language. Some use even the language of other editors, JavaScript, so as to accomplish the same things. We have to chose carefully.
- That process is not so easy, however, if we use a template to guide us, we can easily make our plugins. Then we must know the features and function of the main Photoshop tool as well as its important features to avoid such as "Abusing the Photoshop technology".
