What's New in the ReaSoft PDF Printer?

If you're a print-loving user of any OS, chances are you have a printer driver on your computer that let you print web pages, text files and even images. The problem is, sometimes you have a driver that works really well for most files but just doesn't support one or a specific file type. The good news is, you can always remove your printer driver and use some other solution instead, like one of the following programs. By default, Word documents, Excel files, Photoshop files, and a variety of other popular files are set to be printed using printer drivers that are installed with Windows. However, if you just want to print a specific file type, you might have to download a driver to your computer and then install it so you can print that file type. Here are five different programs you can use to remove a printer driver from your computer so you can print without worrying about what you're sending to the printer. WisePrint is one of the most popular programs on the market to remove printer drivers. As the name suggests, this program is

used to help you manage your printing options. Once you install it, you'll find that it includes an easy way to print different file types like Word documents, PowerPoint presentations, and images. For the price, you get a lot of features, including support for advanced printing options, including fine-tuning the toner usage and adjusting the paper tray.

Inkscape Inkscape is an open-source vector graphics editor that lets you use many different image file types as well as import text and other files to create documents. To remove a printer driver, just make sure you have an Inkscape file and then send the file to your printer using this program.

LanDesk While we're on the subject of sending documents to the printer, you might want to take a look at LanDesk. This program allows you to make sure that a document is sent to the printer when you hit Print in your Windows software. It's especially useful if you're sending a document to a group that uses multiple printers.

Printers.com Sometimes you need to remove the printer driver from your computer but you have a special file type that you want to be able to print. If you use the program Printers.com, you can have all of your print jobs sent to the right printer.

SmartPrinter If you need to print a specific document type or file, SmartPrinter is the way to go. You can create a basic print template, customize it with a specific size and paper source, and then just set that template as your default printer.

Best Buy Printer Do you have an old or damaged printer that's hanging around but you
