It's that little grey box that shows you where you are in your workflow, and where you can make changes. In fact, Lightroom pro users will be delighted by a lot of little details. For example, an updated History panel and a new Markups panel enable you to "comment" on any changes in PSD files and thereby share your workflow with others. Similarly, there are new ways to save, share and version your projects. At long last, privately saving projects are now grouped together, just as saved galleries are. You can "comment" on all the major changes if you so wish. A new History panel gives you all your latest changes and comments so you can keep track of changes in your workflow wherever you are. Of course, some would say that it makes no sense to date project files since the Adobe update is for reference purposes. But, for those of us who use the tool to create images for print, the situation is quite different. We upload a lot of photos, and they pretty much change over time. We also create versions for our accounts and friends so that we always have the original version. When evaluating the entire package, I need to ask myself: "Does the product have a potentially enormous range of uses outside of being a desktop application?" That goes without saying, but I also ask myself: "How much potential do I have to learn about it, beginning with the software and expanding to the other tools that come with it?" That's a crucial element to my satisfaction with the iPad Pro and Adobe Sketch.
