Gerald R. Molen Gerald R. Molen (March 5, 1929 – May 17, 2019) was a Canadian-born American architect who focused on the preservation of historic buildings. Biography Born in Montreal on March 5, 1929, Gerald R. Molen graduated from Yale University in 1952. He received a Masters of Architecture from Princeton University in 1955 and a Doctorate of Philosophy in Architecture from Columbia University in 1961. Molen worked for Skidmore, Owings, and Merrill in New York City from 1957 to 1971. In 1971 he joined the firm that in 2011 became called Holabird-Root which was founded by Paul Philippe Cret in 1880. Molen won numerous awards including the National Institute of Arts and Letters Award for Preservationist (1981), the American Institute of Architects National Agencies Award (1983), the American Institute of Architects Medal (1985) the New Haven Landmarks Preservation Trust Award (1987), the American Institute of Architects Medal (1986), the Honor Award, American Institute of Architects, New York Chapter (1989), and the National Preservation Fellowship (1989). Molen died May 17, 2019 in New Haven, Connecticut. Notable buildings designed by Gerald R. This. (1) Field of the Invention The present invention relates to a technology for estimating an instantaneous driving force of an internal combustion engine by evaluating sensor signals such as an accelerator pedal position signal. (2) Description of the Related Art There is a known accelerator pedal position estimating apparatus as an apparatus for estimating an accelerator pedal position of a vehicle in which a sensor detects a relative position of an accelerator pedal and a link and an electronic control unit evaluates the detected relative position to estimate an instantaneous value of the accelerator pedal position of the vehicle. The electronic control unit supplies the instantaneous value of the accelerator pedal position of the vehicle to a vehicle controller, which in turn controls a vehicle driving actuator based on the instantaneous value of the accelerator pedal position of the vehicle. Generally, the range of the magnitude of the instantaneous value of the accelerator pedal position of the vehicle is divided into a plurality of discrete regions and a plurality of switch means corresponding to the respective regions are provided. For example, a plurality of switch means are provided which are turned ON/OFF depending on whether the magnitude of the instantaneous value of the accelerator pedal position of the vehicle is larger than a threshold value. The switch means which is turned ON represent a current position of the accelerator pedal of the vehicle. Accordingly,

the switch means can be used as a position detection means for detecting the current position of the accelerator pedal of the vehicle. For example, when the vehicle is under an idling operation, there is a case where a driver moves the accelerator pedal close to the limit of the forward displacement of the accelerator pedal. In this case, the positions of the switch means corresponding to the plurality of discrete regions are switched. Thus, the throttle valve is closed and the engine is brought into a steady state with a negative output of the throttle valve. Accordingly, the switch means corresponding to the plurality of discrete regions which are turned ON represent the current position of the accelerator pedal of the f988f36e3a
