Recently, a display having a thin thickness of not more than 1.5 mm, preferably not more than 1.0 mm has been developed. As a polarizing plate used for such a thin and lightweight display, a glass-made polarizing plate having its surface coated with a polarizing film of polyvinyl alcohol, iodine or the like has been used. However, such a glass-made polarizing plate requires a long time for its production process, has a poor productivity, and is therefore expensive. Thus, for the purpose of simplifying the production process of a polarizing plate, a resin-made polarizing plate has been developed. This resin-made polarizing plate comprises a polarizing film, a polymer film and a transparent substrate laminated in this order. As the method of producing a resin-made polarizing plate, a method comprising laminating a polarizing film and a polymer film on a transparent substrate with a hot-pressing method or a solution casting method has been known (Japanese Patent Unexamined Publication (KOKAI) No. H6-71580 and Japanese Patent Unexamined Publication (KOKAI) No

More information: Can't see any option to enable IPv6 in settings A: As per my knowledge and research there is no way to turn on IPv6. IPv6 will be enabled when IPv4 is turned off or disabled. You can't turn on IPv4 and disable IPv6 at the same time. IPv6 will work in the same way IPv4 does. But on the other hand, if you have already enabled IPv6 then the IPv4 is not disabled. So if you want to disable IPv4 you need to remove IPv6 from registry first and then disable it. No one can disable IPv6 because it is not needed and useless. So this question is not about disabling IPv6, but it is about turning it on and off. If you are trying to disable IPv4 or disable IPv6 then you need to manually delete/remove the IPv6 registry key in the registry and it is the same as disabling IPv4. A: With Windows 10, there is a new control panel feature that allows you to disable IPv6. It can be found in the "Network and Sharing Center" Under the "Internet Options" section, the following settings are available. The corresponding text reads: "This connection is using the IPv6 protocol. IPv6 traffic is enabled in this location. [v]" This was tested on Windows 10 Version 10.0.14393.0 (Build 14393.11) (10.0.14393.11)
