Turbo Navigator is an easy to use file manager designed to replace the traditional Windows Explorer, while offering an intuitive interface and an impressive pack of features. And rightly so. Since I'm learning kali it's best to keep my real IP as hidden as possible. Not to mention he would also be able to bypass any sort of user logins. Also, technically speaking, your IP would only change when you change your hostname. I've been using this app for 2 years now

and while I've changed hostnames a few times it hasn't been a problem. My only warning is that whenever I need to change my hostname, it also changes my IP. So, if you are planning on leaving your hostname the same, then it would be best to change your IP first. I've also taken into consideration that the app uses your hostname to determine your current location which is why I change the hostname at the same time. To conclude, if you want to stay hidden, then this is the best app out there. The only downside

is that you cannot change your hostname while you are using the app. And rightly so. Since I'm learning kali it's best to keep my real IP as hidden as possible. Not to mention he would also be able to bypass any sort of user logins. Also, technically speaking, your IP would only change when you change your hostname. I've been using this app for 2 years now and while I've changed hostnames a few times it hasn't been a problem. My only warning is that whenever I need to change my hostname, it also changes my IP. So, if you are

planning on leaving your
hostname the same, then it
would be best to change your IP
first. I've also taken into
consideration that the app uses
your hostname to determine your
current location which is why I
change the hostname at the same
time. To conclude, if you want to
stay hidden, then this is the best
app out there. The only downside
is that you cannot change your
hostname while you are using the
app. Good thing I only needed a
temporary one. Great App. Easy
to use, simple to understand and
really fast. Original review by

What's New in the?

Turbo Navigator is an easy to use file manager designed to replace the traditional Windows Explorer, while offering an intuitive interface and an impressive pack of features. Navigate in a two panel view The

moment you launch the app is also the one that proves you that Windows Explorer is only an old-fashioned way of managing files, as Turbo Navigator provides a two-panel interface with full drag and drop support. Right clicking on any file or folder stored on your computer opens the classic Windows Context Menu, but the application also comes with a built-in file viewer that allows you to open text and binary files. Enjoy media files as you work. Additionally, it also features dedicated tools to handle multimedia formats such as WAV,

MID, AVI and MP3, while also comprising an advanced favorite manager to save your favorite locations for quick access.

Modify attributes quick and easy
Other than that, Turbo Navigator shows transfer speed and detailed folder description, while a dedicated “Change Attributes” screen allows you to modify the attributes of any file or folder on your computer with just a few clicks. Truth is, this isn't the best looking file manager we've seen, but Turbo Navigator still does its job very well, while remaining very light on hardware resources

all the time. As for the file copying process, it goes blazing fast, with a minor slowdown noticed when dealing with larger files. To end with Overall, Turbo Navigator is clearly a useful file manager, but it still needs a bunch of improvements to be able to cope with today's user requirements. It's a good choice though, especially if you wish to get rid of the old-fashioned Windows Explorer. Updated on: 01-04-2017 The collection of 6 Turbo Navigator Premium Packs is offered in this program for a discount of 50%. Check it out!

The Turbo Navigator Premium Packs are offered with a discounted price of 35 EUR.

About Me Author of the books "How to use your PC", "Microsoft Windows XP and Office 2003 for Dummies", and "PC Auditing for Dummies".
