In an effort to get us excited for the Apple Watch, Apple is offering a one-year subscription to Apple Music for \$9.99 (normally \$14.99). We're less than two years from a wearable that will basically be a music player. Why not get a head start on some tunes with this special Apple Music offer? If you can't claim this for free when you initially subscribe, you can get the Watch at a 50% discount just by pointing your iPhone at the Apple Watch display. Other than the Performance Enhancements, I'd say most of the changes in Lightroom 5 are just, well, enhancements- under the hood. Nothing revolutionary, really, but they'll make you happy if you're already a big fan. As you can see from my Lightroom 5 review, I love Lightroom, though I've been using it on and off for several years. Lightroom may not be the most intuitive software around, but it is, I think, one of the best of its kind. I can see why Adobe adds a new version all the time, as they crank out new stuff that just adds to the existing functionality such that they must continually release maintenance updates. In addition, I think the new version Clean Up is great, as it simplifies some tasks from the previous version that were too cumbersome to the average user. Lastly, the new Import-Export functions are pretty slick, and have improved due to a change in the way that the software's users can handle the task from within Lightroom as opposed to having to go to Adobe Photoshop. Overall, the newest Lightroom version is quite a step in the right direction. It does tend to work better on Windows 8 than 7. If you're an out-of-the-box Windows 7 user, you may want to try upgrading to Windows 8 for better performance on your system. I do. Without giving anything away, you'll find the new version of Lightroom handles images much better than the old one. In addition, if you use Lightroom to edit on a large external drive connected to your computer such as a RAID enclosure, the new version will only ask you for a password BEFORE the entire Lightroom catalogue is uploaded to the drive. This is a big improvement over the old version, as before, you'd have to reenter a password each time you switched between Lightroom's Catalogs on separate drives. Overall, Lightroom 5 is a big improvement over Lightroom 4. I think in some ways, it's become an even better app than when it was first released. And, it's gotten even better over the release cycle.
