The third feature is integration. It also sees a great deal of excitement. These integration features are already available in the creation of AI's, but now, for the first time, they will be extended to the editing of them. You are able to host a website and a mobile app that displays your AI creations in real time. That's a pretty amazing feature especially as you can actually see the edits that your AI is making. And finally, AI editing now supports layers, which means that you can edit AI files in Photoshop with layers. This is pretty advanced stuff. AI in the past, for instance, could barely understand layers and this is a big factor in the perceived simplicity of AI Editor. Finally, if you just want to access new features then you can get a sense of what's coming in 2019 and 2020 in the Photoshop for iOS App Preview Feed on your desktop. It offers instant previews of updates to all supported products and provides a stable foundation for testing new features in assets and files. Adobe is also playing its support card close to its chest and you need to be prepared to do a little bit of guess work. There's a chance that some features will only be available to customers of the Creative Cloud or just the Creative Cloud Elements. For instance, the Commissioning panel makes it possible to create Custom Actions in Photoshop CC 2019. You can use Control Points and other CorelDRAW commands from CorelDRAW Elements, MoD, and VectorWorks to create your custom action in Photoshop.
