Lenovo is a fairly reliable brand in the best 2-in-1 laptops world so you're onto a good thing with the Lenovo Yoga 7i. It has a 12th-generation Intel Core i5 processor as well as 8GB of memory and 512GB of SSD storage. That's all you need to be able to get work done on the move but the Lenovo Yoga 7i makes sure that you do so in style. That's thanks to it having a 14-inch 2.2K screen with a 2240 x 1400. Besides offering 100% sRGB color gamut and 300 nits of brightness, it's also a touchscreen which means you can use it in a more tactile way than relying on the clickpad. Thanks to a 360-degree hinge, you can move it around too so it works in presentation or tablet mode as desired. Alongside that, there's a 1080p webcam with a privacy shutter. You also get a fingerprint reader so you can log in with your finger rather than enter passwords manually. But ultimately, relying on any one app to protect your system, data, and privacy is a bad bet, especially when almost every antivirus app has proven vulnerable on occasion. No antivirus tool, paid or free, can catch every malicious bit of software that arrives on your computer. You also need secure passwords, two-factor logins, data encryption, systemwide backups, automatic software updates, and smart privacy tools added to your browser. You need to be mindful of what you download and to download software only from official sources, such as the Microsoft App Store and Apple Mac App Store, whenever possible. You should avoid downloading and opening email attachments unless you know what they are. For guidance, check out our full guide to setting up all these security layers. The rub lies in getting work done. If you're mostly working with word-processing documents, web-based tools, and other tasks the iPad is good at, it works great. Apple has also made strides in improving multitasking in iPadOS 16. But if your work involves software that doesn't run on the iPad, get a real laptop. Three apps remain the core of every office suite: a word processor, a spreadsheet editor, and a presentation app. Depending on the suite, and, in some cases, depending on which version of a suite you choose, you also get a mail and calendar app, a database manager, PDF-editing software, a note-taking app, website creation tools, and any of a dozen miscellaneous apps and services that cover everything from video conferencing to form-building. Our team ranked Google Workspace slightly higher, and you can find more about why in our roundup of the best office suite software. If you are looking for cutting edge productivity tools, Microsoft and Google are both good choices. Transcribing all by yourself can be a pretty daunting task. But with the **best transcription software applications and**

services you can now convert any audio or video into text quickly, easily, and affordably. For your convenience, **we have reviewed and ranked the best transcription software platforms and services available in 2023 based on a variety of key factors, including accuracy, turnaround times, cost, capabilities, and feedback from real customers.** We also have the most recent pricing details for all of these tools so you can easily compare prices and find the best deal for your budget. We hope this list will help you quickly find the right transcription software or service for your needs and get started on producing high-quality written content from your audio files and video content. After your audio has been transcribed in real-time, you can search the document for specific keywords, adjust the playback speed and skip silences to get the gist of a tedious recording. Powered by Ambient Voice Intelligence, Otter gets smarter with every recording. It lets you train the software to recognize voices and learn context-based language. They even offer a Basic plan with free transcription software for up to 600 minutes of transcribing per month. Express Scribe allows users to convert their audio to text effortlessly through various convenient features. It can transcribe audio files from both analog and digital voice recorders. Moreover, to make the whole process even more efficient, you can also set up file automation to send completed transcripts to your client without needing to do any extra work. It also offers plugins such as the FastFox Text Expander and Express Invoice Invoicing to speed up the process. [Click here to check out Express Scribe.](#) **Top Features & Benefits**

CostExpress Scribe pricing is as follows:

- Free Version
- Paid
 - Express Scribe Basic \$49.99/year
 - Express Scribe Professional \$59.95/year

[Click here to try Express Scribe.](#) **9. Best For Team Players: Descript** Descript is an audio transcription program and a whole lot more. The smart algorithm learns from corrections you make to the transcribed text. This means the more you use the software, the more accurate your results become. The software also memorizes patterns, and commonly grouped words when you speak, to predict which words are most likely to occur. This acts as an extra boost to your speech recognition accuracy. You will want to pick a software that offers auto-digitizing if you do not want to digitize the design yourself from the .png or .jpg. Hatch 3 is my favorite of the bunch for that. However, auto-digitizing has a lot of limitations, and you cannot usually convert complicated .jpg or

.png files well. (Basically, auto-digitizing is best for simple designs with a minimal amount of colors.) If you want to digitize anything more complicated, you will need to manually create the design, which any of the listed digitizing software will let you do. I recommend doing the free trials for the software and seeing how the auto-digitizing works for your images before purchasing anything, though.
