How to Hide Your Important Folders with Free Hide Folder 2.5

If you have some folders on your Windows computer that you want to keep private from other users, you may need a software that can hide them effectively. One of the options you can try is Free Hide Folder 2.5, a free application that lets you select and hide any folder on your system. In this article, we will show you how to use Free Hide Folder 2.5 to protect your sensitive data from prying eyes.

Step 1: Download and Install Free Hide Folder 2.5

You can download Free Hide Folder 2.5 from the official website of Cleanersoft Software[^1^] or from other trusted sources like Filehippo[^2^] or Softonic[^3^]. The file size is about 900 KB and the installation process is very simple and fast. Just follow the instructions on the screen and choose a destination folder for the program.

Step 2: Launch Free Hide Folder 2.5 and Set a Password

When you run Free Hide Folder 2.5 for the first time, it will ask you to set a password for accessing the program. This password will be required every time you want to open Free Hide Folder 2.5 and manage your hidden folders. Make sure you choose a strong and memorable password and don't share it with anyone.

Step 3: Add Folders to the List and Hide Them

After setting a password, you will see the main interface of Free Hide Folder 2.5, which is very simple and intuitive. You can easily add folders to the list by clicking on the Add button and browsing your computer for the folders you want to hide. You can also drag and drop folders from Windows Explorer to the list. Once you have added all the folders you want to hide, you can click on the Hide button in the main menu or right-click on any folder and choose Hide Selected Folders from the context menu. The folders will disappear from Windows Explorer and become invisible to other users.

Step 4: Unhide Folders When You Need Them

If you want to access your hidden folders, you need to open Free Hide Folder 2.5 with your password and select the folders you want to unhide. Then, you can click on the Unhide button in the main menu or right-click on any folder and choose Unhide Selected Folders from the context menu. The folders will reappear in Windows Explorer and become visible again.

Step 5: Change Settings According to Your Preferences

Free Hide Folder 2.5 also allows you to customize some settings according to your preferences. You can click on the Options button in the main menu or go to Tools > Options from the menu bar. Here,

you can change your password, enable or disable hotkeys, choose whether to show hidden files in Free Hide Folder 2.5 or not, and more.

Conclusion

Free Hide Folder 2.5 is a simple and effective tool that can help you hide your important folders from other users on your Windows computer. It is easy to use and does not require any technical skills or knowledge. However, it is not a foolproof solution and it does not encrypt or password-protect your folders, so it may not be suitable for highly confidential or sensitive data. If you need more advanced features and security, you may want to look for other alternatives like Wise Folder Hider[^4^] or other paid software.
