

## Where To Buy Cobb Accessport

I purchased a used accessport v3 from the previous owner of my 2006 mazdaspeed6. It was already setup for my car and had been used but then Uninstalled by the previous owner in case another person wanted it. I had purchased it shortly after the vehicle. It allowed me to install and tune the vehicle with OTS maps, but the option for Uninstall is available; does that mean it is not functioning properly? Will I be able to register the accessport? When I installed the accessport it downloaded my factory map. When I go to un-marry my accessport and I go to un install does it automatically download the factory map back onto the car or do I have to do the factory map download first then go to un-install so I can have a friend use it on his fiesta? Hey Kyle,

I bought a used unmarried AP3-SUB-004 accessport which was used on 2018 WRX. I own a 2019 STI. When i uploaded a 2019 map into the accessport using the accessport manager it showed me a warning that the car model in which on which the accessport was installed doesnt match even though the website says AP3-SUB-004 is compatible with all subaru models from 2015-2019. Should I be concerned? I have an accessport I am getting rid of and need to unmarry it from the car. I currently have an APR stage 2 tune on it with out unmarring the accessport on the car. Can I unmarry the accessport from the car with out removing the APR tune? I have got a V3 accessport that came from a BMW 13i N55

It has been ininstalled correctly. To my understanding i just need to get the part number changed to work on my 2009 Subaru Impreza WRX STI ADM spec. Hi good days, I have a COBB accessport V3 in my car and tuned by a COBB ProTuner, and he is no longer do the custom tune job, now I am going to find another to dyno tune my mazda 3 MPS but he said I need to get a licence first, what should I do if I need a retune by a different person? The COBB Tuning Accessport is the first and easiest modification you can make to your car to see instant results. How does it work? Each car has an engine control unit. The ECU software's job is to manage the multitude of signals from your engine, then make adjustments to parameters such as air/fuel ratio, ignition timing, and boost to make the engine run optimally. Learn more in this video where we walk you through the basics of the Accessport and some of its features., designed to improve the driving experience. Cobb gave tuners just 30 days between the flex-fuel system stop-sale and the end of support for it. If you're a reputable shop with plenty of customers, you have people waiting for installs beyond that short period of time. "We're backed up months. Some people are backed up half a year," Pincura said. "That's where it's messed up. There should've been better communication." And that really gets at the core of the issue. As Pincura explained, shops will still be able to get customers the power figures they want. Tuning as an industry isn't going anywhere, but it's getting a lot harder to do what they do because of questionable responses to regulatory challenges by companies like Cobb. A future where the government clamps down harder on vehicle emissions is a given, that much is clear. How tuners and the aftermarket navigate this landscape is where the rubber hits the road. In the meantime, a trusted name in the aftermarket industry has made a whole lot of enemies, people everywhere may have lost money on hardware that is no longer supported by the company that made it, and aftermarket tuning is worse off than it was just a few days ago. Modifying cars is getting harder and it's unlikely to get easier. Clearly, despite the enduring nature of the enthusiast scene, we can't take anything about this hobby for granted anymore. I will be buying a cobb access port in the future for my 06 sti, and would like to know if I can install that myself. I am a new subaru owner so I dont know what are the steps to take. Also will I need anything else other than the access port for it to work? Sadly, we have seen situations where sellers take pictures of the "Install" option and then re-install the Accessport prior to selling it. We recommend you protect yourself by confirming the installed state in person. The most powerful tuning tool just got better! With Molded Innovations faceplates you can now customize the look and feel of your accessport, these stylish face plates easily clip on to your V3 Accessport, once installed everyone will know you mean business. All

of these faceplates are hydro dipped!
