Download The Designers Dictionary Color Rar _VERIFIED_

LINK

Love one of these color combos? Be sure to pin it on your design mood board so you can get inspired later. Scroll to the bottom to get your free swatch download to easily access all of these color palettes in design applications. The project aims to create a feature-rich dictionary lookup program. The latest release is **1.0.1**.You are welcome to look around, download the program, provide feedback, and join the cause.FeaturesThe program has the following features:

- Use of WebKit for an accurate articles' representation, completewith all formatting, colors, images and links.
- Support of multiple dictionary file formats, namely:
  - Babylon .BGL files, complete with images and resources
  - StarDict .ifo/.dict./.idx/.syn dictionaries
  - Dictd .index/.dict(.dz) dictionary files
  - ABBYY Lingvo .dsl source files, together with abbreviations.The files can be optionally compressed with dictzip. Dictionary resources can be packed together into a .zip file.
    - ABBYY Lingvo .lsa/.dat audio archives. Those can be indexedseparately, or be referred to from .dsl files.
- Support for Wikipedia, Wiktionary, or any other MediaWiki-based sites to perform lookups in.
- Ability to use arbitrary websites as dictionaries via templated Url patterns.
- Ability to run arbitrary external programs for audio playback or content generation (text-to-speech, man pages etc) (use the latest Git version for this)
- Support for looking up and listening to pronunciations from forvo.com
- Hunspell-based morphology system, used for word stemming and spelling suggestions.
- Ability to index arbitrary directories with audio files for pronunciation lookups.
- Full Unicode case, diacritics, punctuation and whitespace folding. This means the abilityto type in words without any accents, correct case, punctuation or spaces (e.g. typing'Grussen' would yield 'grüßen' in German dictionaries).
- Scan popup functionality. A small window pops up with the translation of a word chosen from another application.
- Support for global hotkeys. You can spawn the program window at any point, or directly translate a word from the clipboard.
- Tabbed browsing in a modern Qt 4 interface.
- Cross-platform: Linux/X11 and Windows + portable to others.
- Free software: GNU GPLv3+ license.

Mobile versionA commercial mobile version is now available for Android devices. Using it is the best

way to support this project financially.

AlsoIf you're a Linux sysadmin, check out zbackup - a versatile deduplicating backup tool, another open-source project by the same author.
